A **Long Titles Limit Scannability**
Many post titles are full sentences, making it harder for users to skim and know what to expect at a glance.

B **Lack of Tagging or Categorization**
With no visible taxonomy or categories, users cannot filter posts by topic, making browsing overwhelming.

C **Reverse Chronology Hides Key Content**
Important posts may be buried as newer posts take precedence — users have no way to sort by relevance or topic.

D **Inconsistent Formatting Across Posts**
Typography, spacing, and line breaks vary across entries, disrupting visual continuity and reducing readability.

E **No Clear Path to Related Resources**
Posts stand alone without internal linking or related content suggestions, missing opportunities for deeper engagement.

F **Video Posts Not Clearly Distinguished**
Video content blends in with articles and stories, despite the founder's intent to highlight it as a distinct format.
